DriverPass System Analysis

Jorge Chavarria

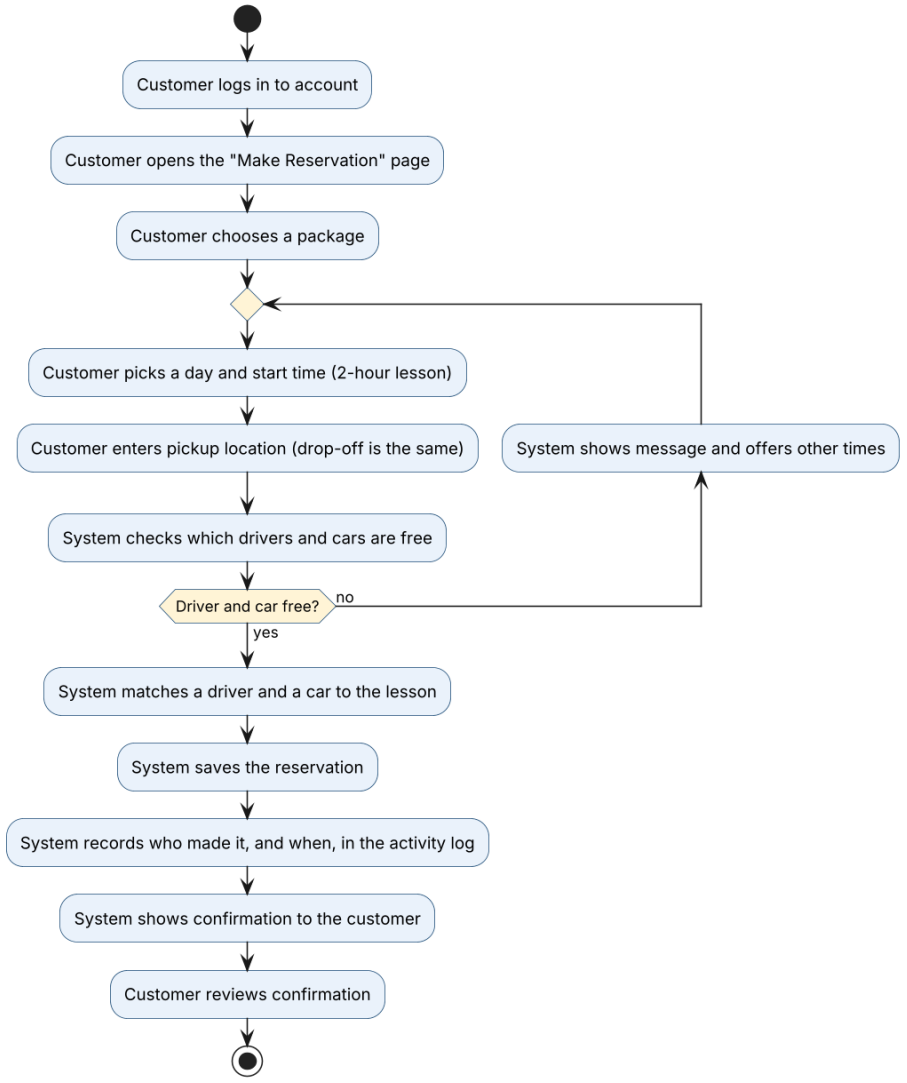

System Requirements

- **What it does:**
- Customers book, change, or cancel 2-hour driving lessons online
- Staff can see which driver and car go with each student
- Customers take practice tests and see their progress
- **How it works:**
- Runs on the web, on any computer or phone
- Keeps a record of who made every change
- Reports can be downloaded to Excel

Use Case Diagram

Activity Diagram

Security

- Every person has their own login and a role
- People only see what their job needs
- Ian can reset or block any account
- Customers can reset their own password by email
- Passwords and card details are scrambled (encrypted)
- Every booking, change, and cancel is recorded
- Pages are protected, and backups are automatic

System Limitations

- Changes only work online; offline you can view downloaded reports
- Three packages for now; a developer is needed to add or change package types
- You can disable a package, but not build a new one yourself
- Needs a steady internet connection
- Depends on the DMV sending updates
- No extra features yet (we can plan those later)
