DriverPass Client Presentation: Slides and Speaker Notes
Jorge Chavarria, CS 255

Slide 1

Speaker notes

Hi, Liam and Ian. Thanks for meeting with us. Today I'm going to show you the plan for the new DriverPass system. I'll go over what the system will do, who uses it, how a booking works, how we keep your information safe, and a few things the system won't do yet.

Slide 2

Speaker notes

These are the main things we'll build, based on what you told us. First, what the system does. Customers can book, change, or cancel a two-hour lesson online. They can also call the office and

the secretary can do it for them. Every lesson is matched with a driver and a car, so you always know who is going where and when. Customers can also take practice tests and see which ones they passed, failed, or haven't started.

Next, how it works. Ian, you said you wanted the system on the web and in the cloud so you don't have to worry about backups, so that's what we're doing. Anyone can use it from a computer or a phone. Liam, you asked to know who booked, changed, or canceled something, so the system keeps a record of every change that you can print. And you can download reports and open them in Excel at home. One thing to know: you can look at downloaded reports offline, but changes can only be made when you're online, so we never end up with two different copies of the same information.

Slide 3

Speaker notes

This picture shows who uses the system and what each person can do. On the left are the customers and the drivers. Customers can book, change, or cancel lessons, take practice tests, check their progress, and reset their own password if they forget it. Drivers can add notes after each lesson and read them later.

On the right is your team. The secretary can sign up customers and book, change, or cancel lessons for people who call or stop by. Liam, you can turn off a package so no new customers sign up for it, download reports, and print the activity report. Ian, you can reset or block anyone's account, like when someone leaves the company. The DMV is also in the picture. When they change a rule or add new test questions, the system gets a notice so the practice tests stay current. Each person only sees the things that fit their job.

Slide 4

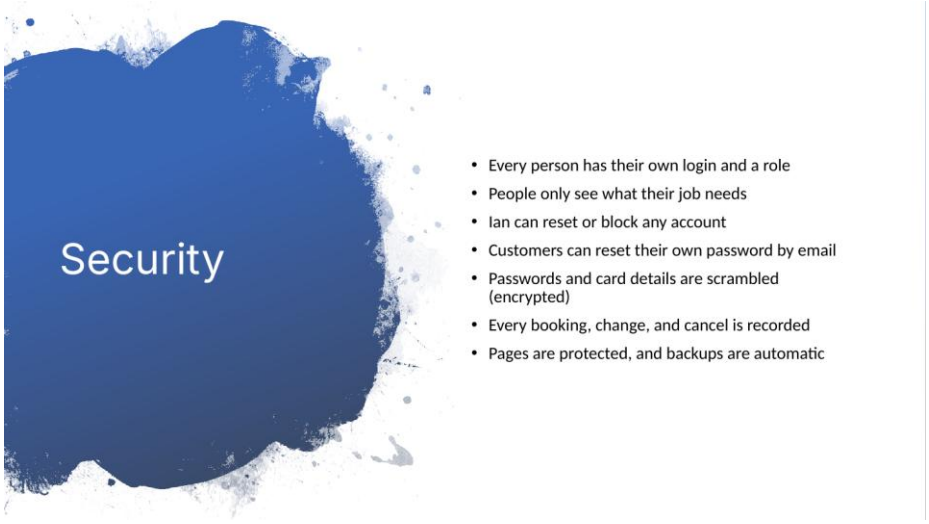

Speaker notes

This slide walks through what happens when a customer books a lesson. First they log in and pick one of your three packages. Then they choose a day and a start time for the two-hour lesson and tell us where to pick them up. The drop-off is the same place.

The system then checks which drivers and cars are free at that time. If nobody is free, the customer gets a message with other times to try. If someone is free, the system matches a driver and a car, saves the booking, and shows the customer a confirmation. It also writes down who made the booking and when. That way, if something goes wrong later, you can look it up and see exactly what happened. Customers can do this themselves online any time, so the secretary has fewer calls to handle.

Slide 5

Speaker notes

Security was a big point in the meeting, so here's how we're handling it. Everyone gets their own login, and what they can see depends on their job. A driver can't see the owner's reports, and a customer can only see their own information.

Ian, you'll be able to reset or block any account. If someone leaves, you can cut off their access right away. If a customer forgets their password, they can get a reset link by email, so they don't have to call you. We also scramble passwords and credit card details so no one can read them, even if someone got into the system.

Liam, you wanted to know who did what. The system records every booking, change, and cancellation with the person's name and the time, and you can print that as a report. Since the system lives in the cloud, the hosting company takes care of automatic backups and the connection between the user and the website is protected, which is what you asked for.

Slide 6

Speaker notes

Every system has limits, so I want to be upfront about them. First, you can look at downloaded reports without internet, but you can only make changes when you're online. That keeps the information in one place and avoids mix-ups.

Second, you have three packages right now. Liam, you can turn a package off so nobody new signs up, but adding a brand-new package or changing what's in one will need a developer. We can plan an easier way to do that in a later version.

Third, the system needs a good internet connection, because it's all online. And the practice tests will only be as current as the updates the DMV sends us. We can add other features later, once this first version is working and you've had a chance to use it.
